PROFILE

AI/ML student and product-minded engineer focused on intelligent, real-time systems for East African financial inclusion. Builds end-to-end from fraud-detection models and NLP research to fully designed product interfaces with equal attention to technical rigor and visual craft. Comfortable owning a project from thesis-grade documentation through to shipped UI.

FLAGSHIP PROJECT

Krania.ai Real-Time Fraud Detection Platform Mini-Project Thesis, ISBAT University

Ongoing

Intelligent fraud detection platform purpose-built for East African financial institutions — SACCOs, MDIs, NGOs, and SMEs.

- Designed and authored a full 40-page academic thesis with LaTeX-rendered mathematical formulations, matplotlib-generated figures, and a complete viva preparation guide.
- Produced a 12-slide presentation deck distilling the system's architecture and findings for academic defense.
- Architected the product layer as Cranium.ai: a live dashboard suite (Upload, Alerts, Login, Get Started) built on a consistent liquid-glass morphism design system.
- Maintained a structured UI bug roadmap, a multi-currency support plan, and a full design-system package (Figma strategy, CSS design tokens, accessibility checklist).
- Grounded design decisions in East African infrastructure constraints, Bank of Uganda regulatory context, and regional payment systems.

OTHER PROJECTS

Axios Clothing Website

AI Fashion Stylist East African Market

- A mobile app PRD and delivered a formatted addendum covering MVP scoping, AI/data strategy, biometric privacy, infrastructure, and regional payment fit.

Nzuri AI — An offline AI assistant

Maze the 28th — Multi-page Artist Website

Lucky — Collaboration with Mark Paul

- Produced SVG figures and reformatted the thesis document to match academic quality benchmarks, in collaboration with Atiki Clovis.

SAANA- A website for Contemporary African Art.

PROCURA- A website for Procura Publishing.

Grace & Pages- A devotional website

EDUCATION

BSc, Artificial Intelligence & Machine Learning — ISBAT University, Uganda

in Progress

- Mini-project thesis: CRAINUM — real-time fraud detection for East African financial institutions.

SKILLS & TOOLS

- AI/ML: fraud detection systems, NLP, sentiment analysis, model evaluation
- Product & UI Design: glass morphism / liquid-glass design systems, Figma, accessibility
- Frontend: responsive design, Motion.js animation, CSS/JS auditing
- Domain: East African fintech, financial inclusion, Bank of Uganda regulatory landscape
